

Aquatic Station

Dr. Jeff Steinmetz
Biology Department
Francis Marion University

Envirothon Curriculum

- Hydrosphere
- Aquatic Ecosystems
- Organisms
- Aquatics and Society
- Field Skills

Learning Objective 1: Hydrosphere

- Identify different types of water bodies/how they are formed

Rivers

Wetlands

Copyright © 2009 Pearson Education, Inc., publishing as Pearson Benjamin Cummings

Lakes

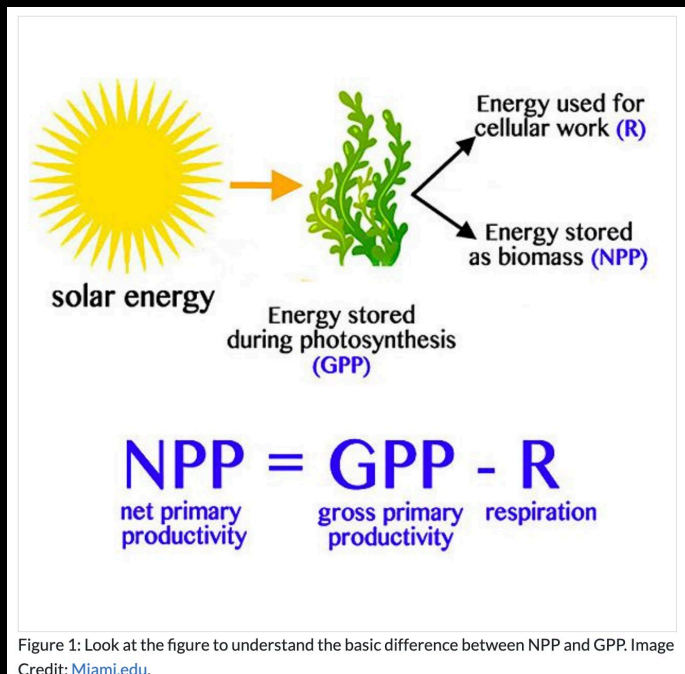

Study Area 1: Hydrosphere

- Types of Wetlands
 - Tidal salt marshes
 - Tidal freshwater marshes
 - Non-tidal marshes
 - Swamps
 - Carolina Bays
 - Vernal pools
 - Bogs/pocosins

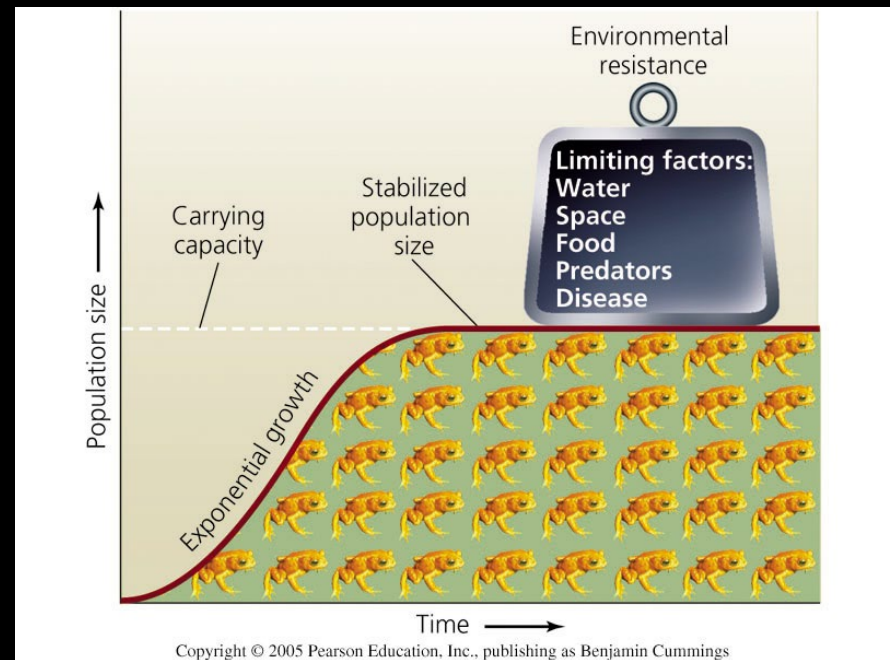

Study Area 2: Aquatic Ecosystems

- Describe structure of aquatic ecosystems

Productivity

Carrying Capacity

<https://www.bio.miami.edu/dana/pix/npp.jpg>

Study Area 2: Aquatic Ecosystems

- Define an aquifer and elaborate on how they relate to local and global water supply

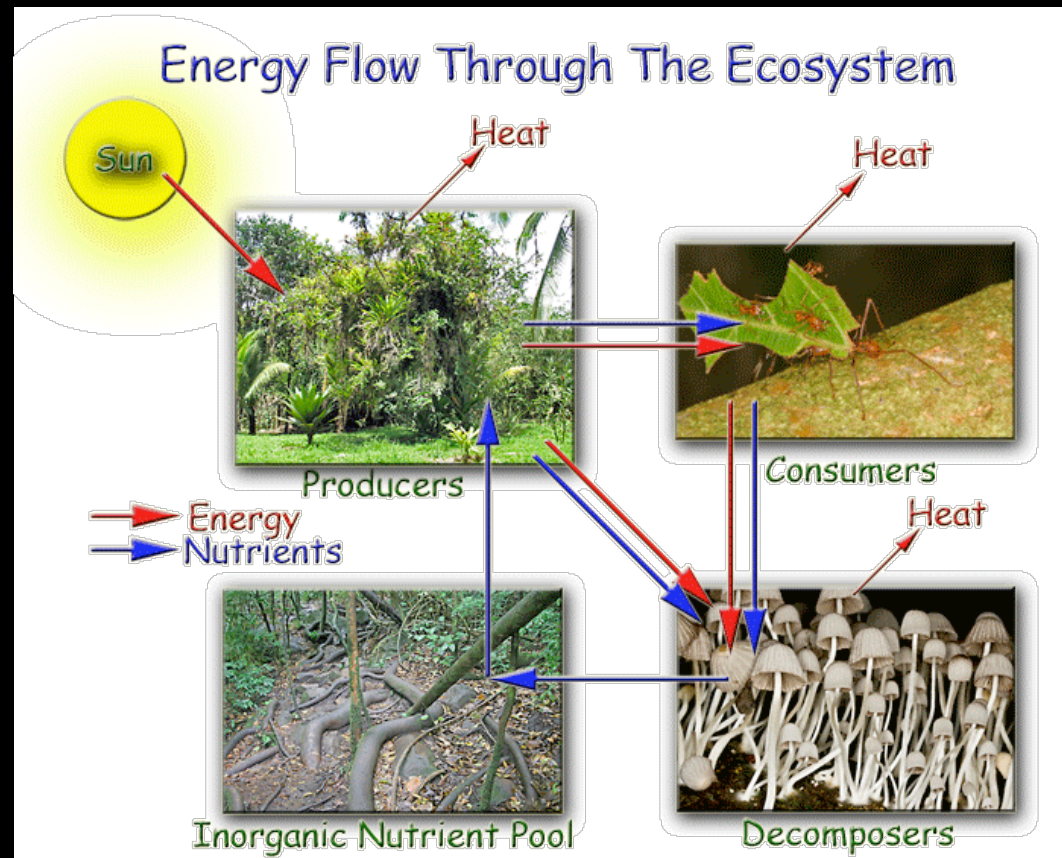

<http://ga.water.usgs.gov/edu/earthgwaquifer.html>

<http://www.ngwa.org/Fundamentals/use/Pages/Groundwater-facts.aspx>

Study Area 2: Aquatic Ecosystems

- Diagram a food web and describe the flow of energy within it

Study Area 2: Aquatic Ecosystems

- Stream Order
 - Starts with 1: smallest, permanently flowing stream
 - Stream of same order come together, to create next order
 - $1+1 = 2$; $2+2 = 3$, etc.

https://en.wikipedia.org/wiki/Strahler_number

Study Area 2: Aquatic Ecosystems

- Describe the basics of hydrology, including
 - Stratification
 - Discharge
 - Runoff

<https://www.britannica.com/science/inland-water-ecosystem/Permanent-bodies-of-standing-fresh-water#ref588630>

<https://www.usgs.gov/special-topics/water-science-school/science/how-streamflow-measured>

<https://www.westonma.gov/253/Stormwater-FAQs>

Study Area 3: Organisms

- Describe the roles of producers, consumers and decomposers and identify their trophic levels

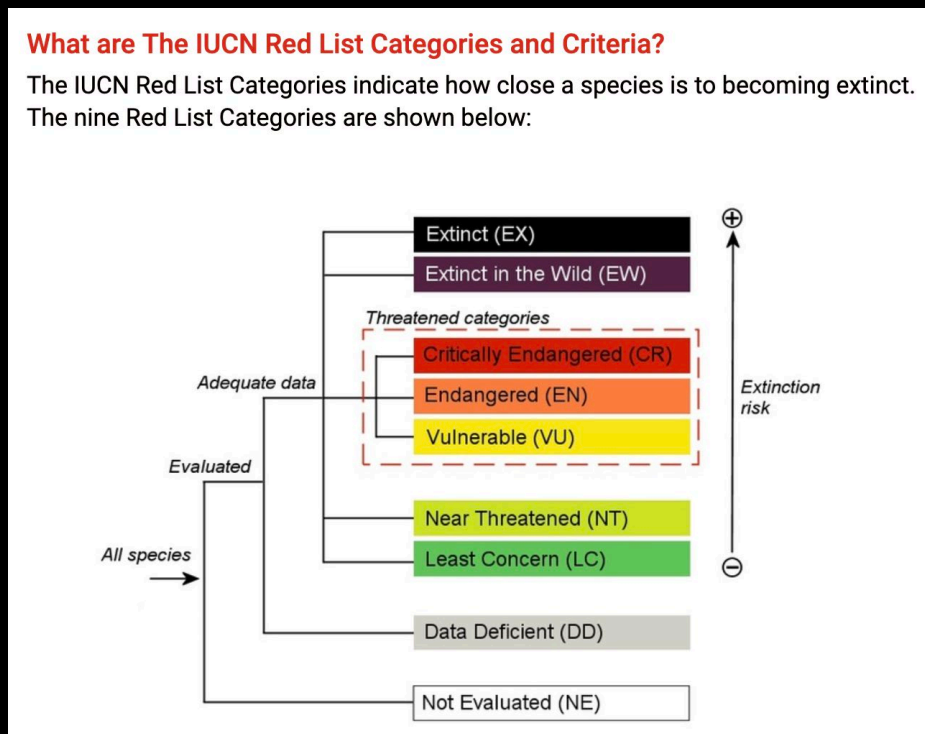

Study Area 3: Organisms

- Describe the roles cyanobacteria and their role in harmful algal blooms (HABs)

Study Area 3: Organisms

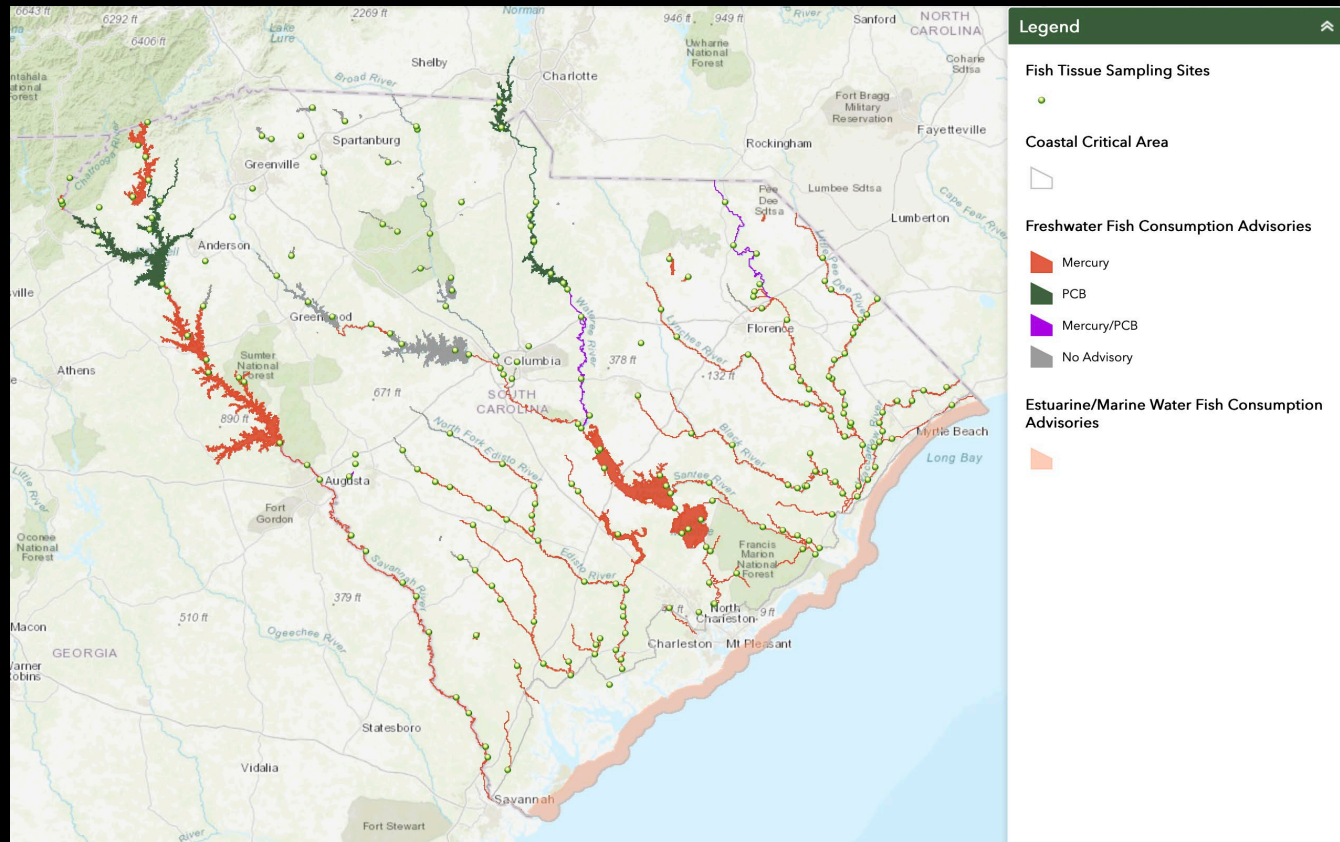

- Explain the distinctions between species designations (such as common, threatened, endangered, etc.)

US EPA Categories	
Endangered	Organisms that have become so rare they are in danger of becoming extinct
Threatened	Organisms that are likely to become endangered within the foreseeable future throughout all or a significant portion of their range

Study Area 4: Aquatics and Society

- Human impact on water quality
 - Fish consumption advisories

Study Area 4: Aquatics and Society

- Identify how major legislation protects water resources
 - Clean Water Act
 - Goal:
 - To restore and maintain the chemical, physical, and biological integrity of the Nation's waters
 - Mechanism:
 - Legal mechanisms:
 - Illegal to discharge into navigable water way without a permit

Study Area 4: Aquatics and Society

- Identify key stakeholders, agencies and organizations that oversee water resource protection and management
 - U.S. EPA
 - Protects surface, ground and drinking water; administers Clean Water Act, Safe Drinking Water Act
 - U.S. Bureau of Reclamation
 - Oversees water storage, delivery, diversions, hydropower in Western U.S.
 - U.S. Geological Survey
 - Provides information on hydrology of U.S., including maps, stream gauging, etc.
 - U.S. Army Corps of Engineers
 - Oversees water navigation, flood control, recreation, hydroelectric power, shore protection, water supply, some restoration work
- **State (for SC, will vary by state)**
 - DES
 - Monitor water quality, issue permits, enforce state & federal regulation, etc.
 - DNR
 - Monitor fisheries / wildlife
- **Local**
 - Supply drinking water / treat waste

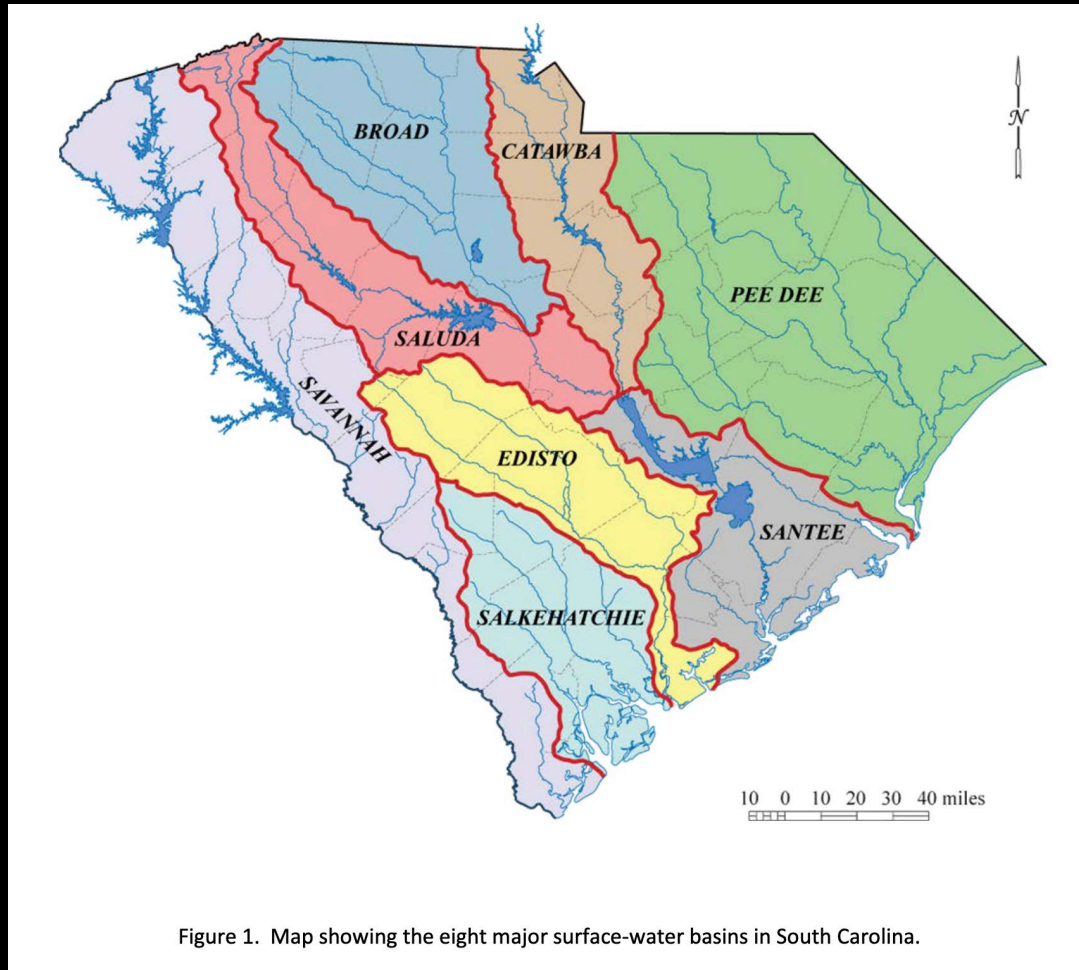

Study Area 4: Aquatics and Society

- Explain why it's important to consider the entire watershed when planning for water quality

Study Area 4: Aquatics and Society

- Identify state river basins

Study Area 4: Aquatics and Society

- Describe water conservation practices
 - Agricultural and industrial
 - E.g. drip irrigation, center pivot maintenance/optimization, cover crops, etc.
 - Personal
 - water saving showerheads (2.5 gallons per minute vs. 5 to 8), low flush toilets (1.6 vs. 7 gallons of water), etc.

Study Area 4: Aquatics and Society

- Describe eutrophication and how it affects lakes and ponds

The consequences of eutrophication for the lake ecosystem. Figure: Piret Vutt.

Study Area 4: Aquatics and Society

- Recommend best management practices for improving water quality such as riparian buffers

Study Area 4: Aquatics and Society

- Distinguish between point and nonpoint sources of pollution

Study Area 4: Aquatics and Society

- Explain economic/societal/etc. impacts on water resources, such as fight between NC and SC over Catawba River

<https://www.circleofblue.org/2011/world/north-vs-south%E2%80%94carolina-states-settle-water-dispute-without-supreme-court/>

Study Area 5: Field Skills

- Identify common fish in SC

<https://www.dnr.sc.gov/freshwater.html>

Study Area 5: Field Skills

- Identify common aquatic macroinvertebrates
 - See guide at end of this PowerPoint

Study Area 5: Field Skills

- Identify macroinvertebrates pollution tolerances
 - Some species more tolerant than others
 - Type / number of organisms reflects water quality
 - https://dnr.maryland.gov/streams/Documents/dnr_bugsheet.pdf

SENSITIVE ORGANISMS
POLLUTION-SENSITIVE ORGANISMS TYPICALLY FOUND IN HEALTHY STREAMS

Mayfly: Order Ephemeroptera- Flat-like or feathery gills on sides of lower body (arrow); three (sometimes 2) long, hair-like tails; 1"; abundant; 11 families.

Stonefly: Order Plecoptera- Two hair-like tails; six jointed legs with two hooked tips each; big antennae; no gills on lower half of body (arrow); 1 1/2"; abundant; 9 families.

Caddisfly: Order Trichoptera- Six jointed, hooked legs just behind head; 2 hooks at back end; may be in a case made of stones, leaves or sticks; non-net-spinning caddisflies have no bushy gills along bottom; 1"; abundant; 20 families.

Water Penny: Order Coleoptera- shaped like a tiny, grey, oblong frisbee; 6 tiny legs on bottom; slow crawler; 1/2"; common.

Hellgrammite and Fishfly: Order Megaloptera- dark body; six jointed legs; large, pinching jaws; many pointed feelers along edge of body (arrow); two small hooks at back end; hellgrammites have feathery tufts of gills along side of body; 4"; rare.

Gilled Snail: Class Gastropoda- shell opens on the right and is covered by a hard shield-like operculum; 1"; rare; 4 families.

TOLERANT ORGANISMS
POLLUTION-TOLERANT ORGANISMS FOUND IN HEALTHY, FAIR OR POOR QUALITY STREAMS

Black Fly: Order Diptera - shaped like a little bowling pin; black head with tiny bristles for filtering food (arrow); suction pad on end; no jointed legs; 1/2"; abundant.

Non-biting Midge: Order Diptera - dark head; body white, gray or reddish; worm-like segmented body; 2 tiny unjointed legs on both ends (arrow); 1/2"; abundant.

Leech: Order Hirudinea - brown or grey, slimy, suction pads on both ends (arrow); 2"; rare; 3 families.

Aquatic worm: Class Oligochaeta - thin and hairlike or thicker like an earthworm; 2 1/2"; common; 8

Ramshorn Snails: Class Gastropoda - No hard cover over opening; shell coiled in one plane; 1/2"; common.

Pouch Snail: Class Gastropoda - shell opens on the left; no hard covering over shell opening; 3/4"; common.

Published March 2004

Study Area 5: Field Skills

- Calculate a biotic index and determine water quality for freshwater systems
 - See key/guides here:
<https://stroudcenter.org/macros/key/>
 - <https://www.macroinvertebrates.org/key>

Study Area 5: Field Skills

- Identify common invasive aquatic species in SC

- Examples:

- Hydrilla
- Asian clam
- Zebra mussel
- Flathead catfish
- Lionfish
- Nutria

- Info here:

<http://www.dnr.sc.gov/water/envaff/aquatic/invaders.html>

- And in the Aquatic Invasive Species Plan here (link on left side):

<http://www.dnr.sc.gov/water/envaff/aquatic/ais.htm>

Study Area 5: Field Skills

- Interpret results of water quality measures

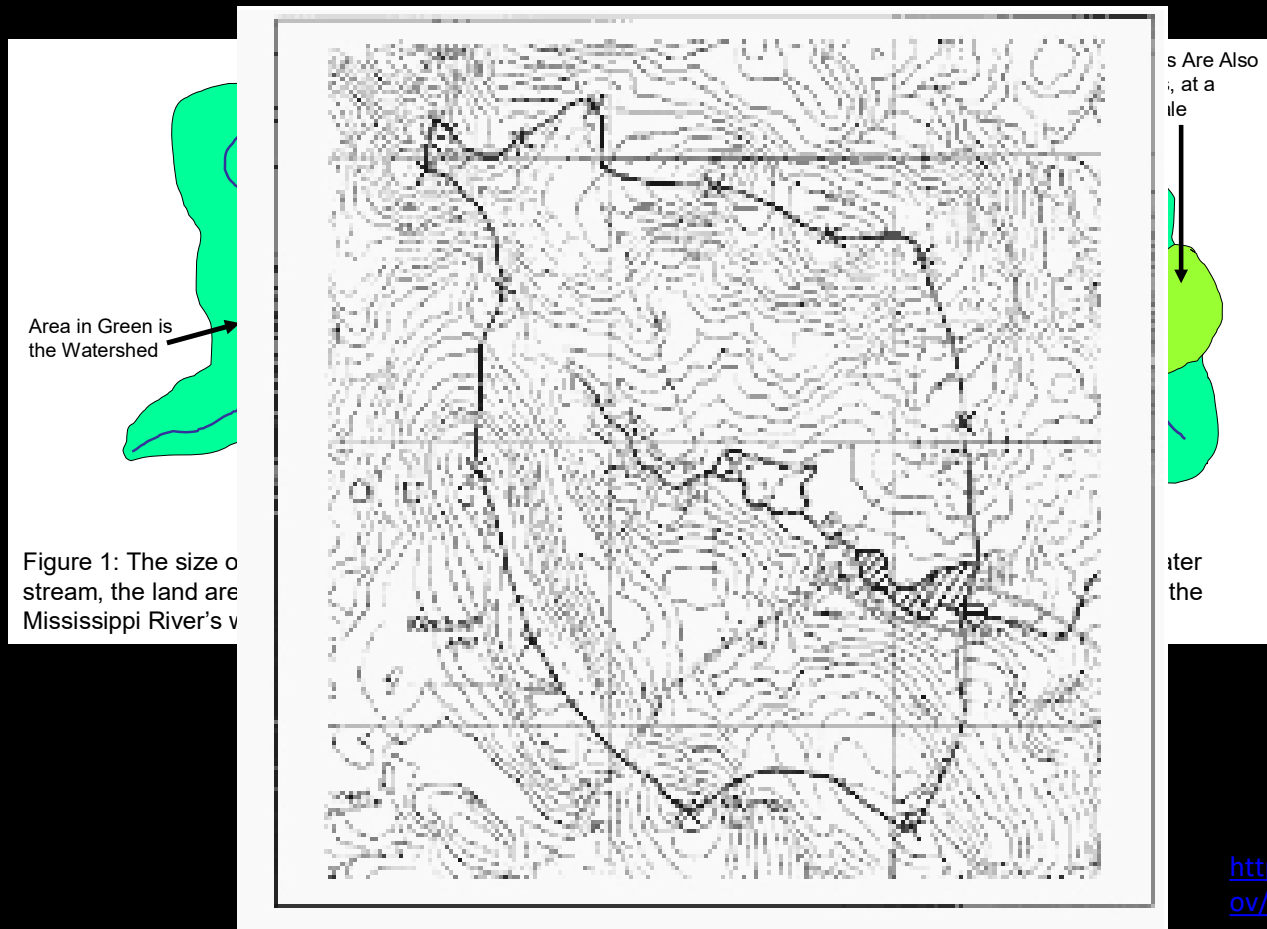

SC DES Water Quality Standards - Quick Guide

Category	Criteria	SC DES Standard	Notes
Nutrient criteria	Chlorophyll a	not > 40 ug/L ; for coastal plain	Different criteria for other ecoregions
Nutrient criteria	Total phosphorous	not > 0.09 mg/L; for coastal plain	Different criteria for other ecoregions
Nutrient criteria	Total nitrogen	not > 1.5 mg/L; for coastal plain	Different criteria for other ecoregions
Bacteria	E coli	monthly ave of 126 MPN per 100 ml; daily max of 349 MPN	
Water chemistry	Dissolved oxygen	daily ave of not less than 5.0 mg/L; low of 4.0 mg/L	
Water chemistry	pH	6-8.5	Does not recognize naturally occurring low pH in blackwater systems
Water chemistry	Turbidity	Not > 50 NTUs (not> 25 NTUs for lakes)	
Water chemistry	Mercury	1.6 ug/L (CMC); 0.91 ug/L (CCC)	CMC = Criterioin maxium concentration (acute toxicity number); CCC = Criterion continuous conenctration (chronic toxicity number)

Study Area 5: Field Skills

- Delineate a water shed using a topographic map

Study Area 5: Field Skills

- Interpret a hydrograph

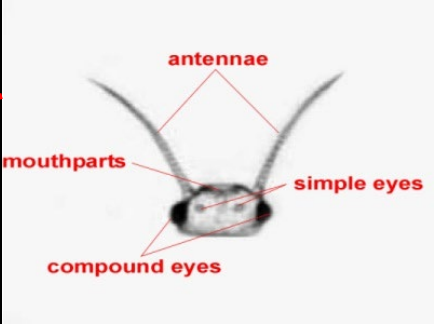

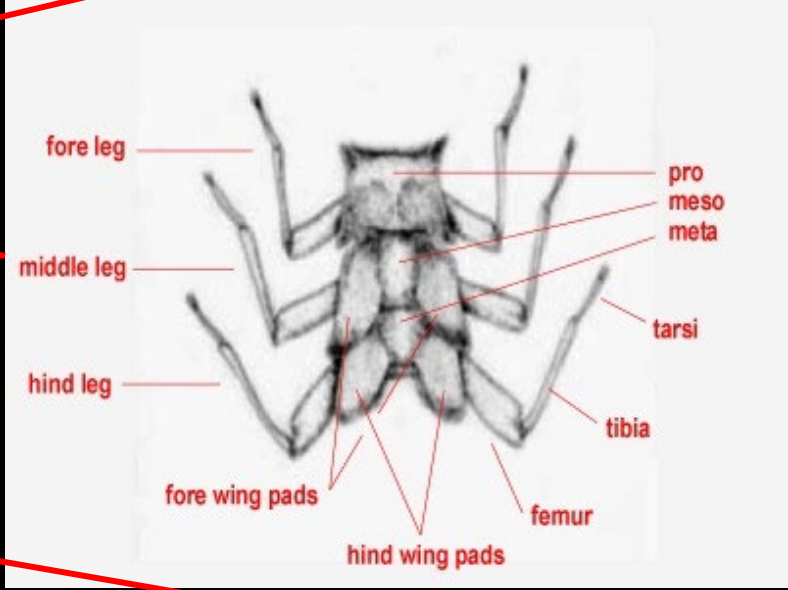

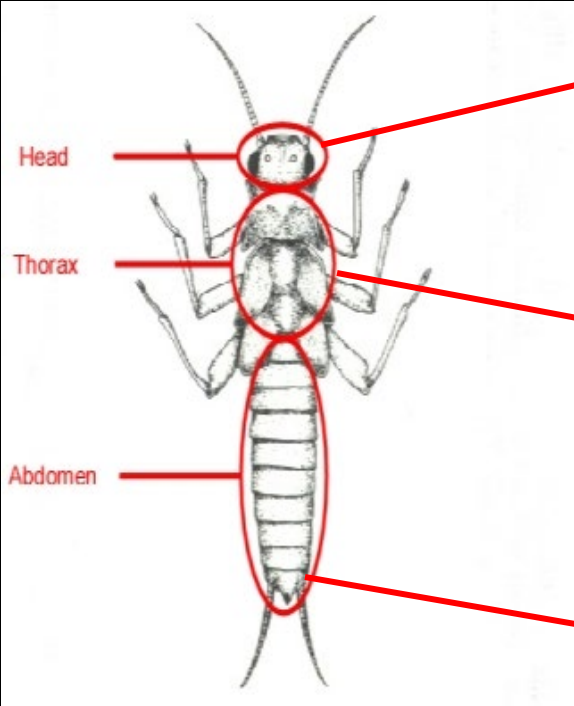

Identification of common stream macroinvertebrates

Scientific Nomenclature

- Way of naming all living things
- Major divisions:
 - Domain → Kingdom → Phylum → Class → Order → Family → Genus → Species
 - Can be other division (e.g. sub-Order, supra-Family, etc.)
- Identification of unknown organisms usually done with dichotomous keys
 - Asks series of paired questions to identify organism

Insect Anatomy

Phylum: Cnidaria

- Only one Freshwater Class
 - Hydrozoa
 - Some have symbiotic relationship with green algae

Phylum: Annelida

- Legless, segmented
- Two main classes
 - Oligochaeta
 - Worms
 - Scavengers
 - Hirudinae
 - Leeches
 - Predators

Oligochaetes

Leeches

Phylum: Mollusca

- Two classes:
 - Gastropoda
 - Snails, Limpets
 - Spiral, single valved shell
 - Grazers
 - Bivalvia
 - Mussels
 - Body enclosed in two hinged, shell valves
 - Filter feeders
 - Most endangered freshwater taxa

Phylum: Arthropoda

- Key traits:
 - Chitinous exoskeleton
 - Jointed appendages modified as legs, mouth parts and antennae
- Three subphyla
 - Chelicerata (water mites and semi-aquatic spiders)
 - Crustacea (crayfish, fairy shrimp, copepods, isopods, amphipods, etc.)
 - Uniramia (springtails and aquatic insects)

Class: Chelicerata

- Major Class is Acari
 - Water mites
 - No antennae, four pairs of jointed legs
 - 1 m² weed bed in eutrophic lake can contain 2,000 mites from 75 species!

Class: Crustacea

- Order Isopoda
 - Like pillbugs in gardens
 - Dorso-ventrally (top-bottom) compressed
- Order Amphipoda
 - Side-swimmers
 - Lateral (side) compression
- Other Orders include:
 - crayfish, shrimp, zooplankton

Class Entognatha

- Order: Collembola
- Springtails
 - Semi-aquatic
 - Live in moist environments, on surface film
 - Abdominal appendage used for springing
 - Eat algae, detritus in surface film

Class: Insecta

- Eight common Orders, plus two less common ones
- All contain mandibles and one pair of antennae
- Adults have three pairs of legs (may be absent in larvae) and wings

Order: Ephemeroptera

- Mayflies
 - Gills on sides of abdomen
 - Usually 3 tail filaments, but sometimes 2
 - Tarsi with one claw
 - Collectors or grazers

Order: Plecoptera

- Stoneflies

- Always two tail filaments
- Tarsi with two claws
- Sometimes can see gill tufts at base of legs
- Predators or shredders

Order: Odonata

- Dragonflies/Damselflies
 - Extendable, grasping mouthparts
 - Hine's Emerald Dragonfly one of few listed endangered insect species
 - Predators

Livingstone © BIODIDAC

© Dan Soluk 1998

Order: Trichoptera

- Caddisflies
 - Small, inconspicuous, one segmented antennae
 - Hard exoskeleton around head, sometimes parts of thorax
 - Usually one pair of prolegs at end of abdomen
 - Some spin webs, live in retreats; others make portable cases
 - Filter feeders or grazers, a few predatory species

Caddisfly cases and retreats

Order: Coleoptera

- Beetles
 - Adults: hard, shell like wings, chewing mouthparts
 - Larvae: generally long, thin, may or may not have filaments coming off abdomen
 - Most predators, grazers

Water
Penny

Order: Hemiptera

- True Bugs
 - Piercing, sucking mouthparts
 - Includes water striders, water boatmen
 - Most are predators: insects, fish

Order: Diptera

- Flies

- Larvae lack three pairs legs
- May have prolegs or psuedopods on one or more segments
- Includes mosquitos, black flies, midges, etc.
- Collectors: filter feeders or gatherers

Order: Megaloptera

- Dobsonflies and alderflies
 - Large, conspicuous mandibles
 - 7 or 8 pairs of lateral, abdominal filaments
 - Predators on other insects

Less common orders

- Order: Lepidoptera
 - Aquatic caterpillars

- Order: Neuroptera
 - Live in and feed on freshwater sponges
